Subject: VIPER Support for West, TX
Date: Thursday, April 18, 2013 1:27:08 PM

Eric/Janine,

Just wanted to send an email out summarizing where we are at.

Deployment created and associated with EPAOSC site. Deployment ID is 143.

Viper Remote 01 - reserved for receiving Pro Rae Guardian data from CTEH. TBA if that is happening or not.

Viper Remote 02 - Setup to look for Weston LINC 196 for mobile monitoring using MultiRAE. Sensors are expected to switch to ammonia at some point. If the meter app doesn't detect that automatically please contact us.

Viper Remote 05 - Setup to receive National Weather Service data from Hillsborough Airport (KINJ)

USEPA Region 6 Viper.NET Database Service is receiving data from Viper Remote 02 (1627) and Viper Remote 05 (1628).

I'm checking with SEE to see if they have had any experience with the VRae. If VRaes are setup to deliver data to ProRAE guardian we would then be able to receive that data via the PRG2CAP functionality.

No alarm levels or TWA requests have been received. And we also currently have no associated Scribe projects.

As always, if any additional support requests come up please let ERT Support and myself know.

Thanks and good luck,

Joe Schaefer
